

Green

WASH's eco-friendly operations support conservation and reduce our overall carbon footprint. Because we recognize the value of being green, we:

- Minimize CO2 emissions with regularly scheduled maintenance. Something as simple as a dirty vent can restrict airflow by 25% and result in an estimated 850 lbs. in increased CO2 emissions annually.
- Promote innovative technologies including card payment systems, which cut down on drive time for our collectors on their coin-gathering routes.
- Utilize GPS on our fleet vehicles to more effectively route service calls and improve fuel efficiencies.
- Offer our partners paperless direct deposits for their commission checks.
- Print on recycled papers and use soy inks.
- Equip our facilities with ENERGY STAR washers and dryers.

By using ENERGY STAR front-load washers, WASH Multifamily Laundry Systems has realized annual savings of 16.8 billion gallons of water and 966 million kWh of energy. Because less time is required by ENERGY STAR dryers, our energy-efficient equipment reduces CO2 emissions by 52 million lbs. over the life of the machines.

In a real-world comparison, that is the same as removing 4,477 cars from the road for an entire year.
